PREFACE

This project was completed at the U. S. Army Natick Research, Development and Engineering Center (NRDEC) and at the Naval Amphibious Base in Norfolk, Virginia at the request of the Commander, Navy Special Warfare Group Two. These efforts were coordinated through the Food Engineering Directorate of the NRDEC under project number IL162724AH99.

The authors wish to extend great thanks to GMT 1 Douglas Young of the Naval SEAL Team TWO for his assistance and efforts in data collection (see Appendix B), evaluation summary, and recommendations. We would also like to thank the members of SEAL Team TWO who were on the field evaluations for their responses.

EVALUATION OF THE RATION, COLD WEATHER, BY NAVY SEALS, 1984

INTRODUCTION

The Marine Corps requirement for the Ration, Cold Weather (RCW) was established in January 1983 to provide more suitable rations for extreme cold weather conditions. The need was recognized by the Marines during their annual deployment to Norway to participate in the NATO Winter Exercises. Requirements for a RCW were developed based on the Marine Corps' experience through testing of earlier prototypes. 1, 2, 3

Known formerly as the Arctic Ration, the prototype RCW used in this report's evaluations provided 4500 kilocalories contained in two, flat, flexible, waterproof packages, and was lighter and smaller than four Meal, Ready-To-Eat, Individuals (MRE). Each of the six menus contained breakfast items, entrees, snacks, and numerous hot drink mixes; all of which did not freeze and contained approximately 50% less sodium than four MRE's (see Appendix A).

The purpose of these field evaluations was to evaluate informally the use of the RCW under both extreme and mild winter environments in the following areas:

- 1. Acceptability
- 2. Consumption
- 3. Satisfaction
- 4. Convenience and Quality
- 5. Water Availability.

MATERIALS AND METHODS

Two cold weather consumer acceptance evaluations of the prototype RCW were conducted in 1984 during winter warfare training using personnel from SEAL Team TWO, Naval Amphibious Base, Norfolk, Virginia. The first trial was conducted during three training periods held between 6-28 February in Goose Bay, Labrador, Canada. The second was conducted between 1-20 July in the Harding ice fields near Seward, Alaska. The men involved had been in the Navy for an average of eight years and three months.

All personnel were limited to carrying and consuming solely the RCW. During the February field evaluation a number of the men completed forms developed by GMT 1 Douglas Young (Appendix B). Following both evaluations, the men completed a general questionnaire on the RCW (Appendix C).

The men were engaged in the following activities while carrying loaded packs (55-75 pounds in Canada and 75-90 pounds in Alaska) during the trial periods:

- Exercise Hunter's Moon, 6 February. A five kilometer ski and one night in improvised shelters (snow caves).
- Exercise Highland Stroller, 13-16 February. A
 nightime ski exercise covering 70 kilometers over
 three nights.
- 3. Exercise Quantum Leap, 21-28 February. Seven nights in the field where 70 kilometers were covered in three nightime movements.
- 4. Harding Ice Field, 1-20 July. A daylight ski exercise in undulating terrain, covering 70 kilometers in eight days.

The weather varied from extreme to mild winter conditions. The coldest recorded temperature for the February exercises was -32.1°C on 10 February with the wind at 37 KM/H, giving a windchill factor of -67°C. The average temperatures for Exercise Hunter's Moon, Exercise Highland Stroller, and Exercise Quantum Leap were -19.4°C, -9.8°C, and -12.4°C, respectively. The coldest recorded temperature for the July exercises was -4°C on 13 July, with the warmest being 26°C on 15 July.

RESULTS AND DISCUSSION

Acceptability

The data from both evaluations indicated that the RCW meal was acceptable, as each meal received a mean ranking of greater than or equal to 5.0. Both Breakfast and Dinner were "liked moderately", while Lunch was "liked somewhat". The lower ranking of the Lunch meal could be because that particular meal was not as well defined as Breakfast and Dinner (Table 1).

In general, the RCW components were also acceptable with the exception of the Granola Bar on the Alaska test (Table 2). The rankings ranged from a hedonic ranking of 5.1 (Granola Bar) to 8.5 (Fig Bar) for the Canadian test and from 4.8 (Granola Bar) to 8.5 (Fig Bar) on the Alaskan test. In both evaluations, the lowest ranking components were the Granola Bar, Chocolate Bar with Toffee, and the Orange Beverage Bar.

As a group, the Breakfast items scored the highest. The Entrees were "liked moderately", with the exceptions of the Beef and Vegetable and Escalloped Potato and Pork entrees, which were "liked slightly". Spaghetti received the highest score. The Snacks were all acceptable, with the exception of the Granola Bar mentioned previously. The top three items for each test were the Fig Bar, Raisinut Crunch, and Oatmeal Cookie Bar. The least favorite items were the Chocolate Bar with Toffee, and the Granola Bar. The Drinks were all acceptable with the Orange Beverage Bar scoring the lowest.

⁺Items not included on Canadian questionnaire.

Consumption

According to Table 3, most of the men consumed the ration not only at designated meal times, but also throughout the day as time permitted (76.2 percent in the Canadian and 63 percent in the Alaskan test). The remainder ate throughout the day with the 6 percent exception on the Alaskan test. The majority (85.7 percent from Canada and 100 percent from Alaska) indicated they had received enough to eat (Table 4). According to GMT 1 Douglas Young, personnel consumed more of their total ration in the Alaskan test than in the Canadian due to boredom and an increase in leisure time resulting from inclement weather.

Table 3. Frequency of Eating Times (%)

	C A N A D A (N = 2 1)	ALASKA (N=16)
At Designated Meal Times Throughout the Day as Time Permitted	0 23.8	6 31
Both of the Above	76.2	63

Table 4. Presence of Hunger (%)

	CANADA	ALASKA
	(N=21)	(N=16)
Got Enough to Eat	85.7	100
Was Often Hungry	14.3	0

Satisfaction

Although the men had indicated that they had received enough to eat (Table 5), they also commented that they would like to see increased portion sizes primarily in the oatmeals and secondly in the entrees. Beverages and Soups received "amount just right" ratings, while Candies and Cakes received "amount somewhat too large" ratings.

Table 5. Food Amount Satisfaction, Mean Ratings (7 point scale, 1=Amount Much Too Small, 7=Amount Much Too Large)

		ADA 21)	ALASKA (N=16)			
	<u>X</u>	SD	<u>x</u>	SD		
Entree Bars Breakfast	3.8 2.7	1.3	3.8 3.5	0.5		
Candies and Cakes Beverages and Soups	4.8 4.0	1.4	4.5 3.1	0.9		

In general, the men felt that variety "should be somewhat more" with the greatest satisfaction being in the breakfast variety (Table 6).

Table 6. Variety Satisfaction, Mean Ratings (4 point scale) (1=Variety Enough Now, 4=Should Be Much More Variety)

	CAN (N=		ALASKA (N=16)			
	<u>X</u>	SD	X	SD		
Entrees	2.4	0.9	2.4	1.0		
Breakfast	1.7	0.9	2.4	1.0		
Candies and Cakes	2.2	1.0	2.0	1.1		
Beverages and Soups	2.3	1.0	2.6	1.1		

Table 7 summarizes the ratings for satisfaction in the RCW's various attributes. Ease of preparation received a "somewhat" to "moderately satisfied" rating. Although taste received the same rating, a few men indicated that the addition of a spice packet would be desirable. Food appearance received a neutral rating of "neither satisfied nor dissatisfied". This could be due in part to the manner of food preparation. According to the men's comments, it appeared that in rehydrating the entree they crumbled the bars so finely that "mush" resulted. Quantity received a "somewhat satisfied" rating. This was reflected in the number of comments suggesting increases in oatmeal, entree, raisinut crunch,

fig bar, and soup portions. Variety within the meal package also received a "somewhat satisfied" rating. Although variety between meal packages received a neutral rating, a few submitted comments indicated that the men would like to see more variety in candy, chocolate bars, soups, and cakes.

Table 7. Attribute Satisfaction, Mean Ratings (7 point scale, l=Very Dissatisfied, 7=Very Satisfied)

	CANA (N=2			ASKA =16)
	<u>x</u>	SD	<u>X</u>	SD
Ease of Preparation Taste		1.4	6.3 6.0	0.6 0.7
Appearance Quantity		1.0	5.2 5.9	1.1
Variety within a Menu Variety between Menus	5.2 4.0	1.7	5.2 4.7	1.5

Convenience and Quality

Overall the RCW received favorable rankings in convenience and quality (Table 8). As the MRE was not as readily available as the MCI when the questionnaire was developed in 1981, the men were asked to compare the RCW to the MCI. The ration itself was rated moderately convenient. When compared to the Meal Combat Individual (MCI), the RCW was ranked "somewhat more" in both quality and convenience. A few men from the Canadian evaluation commented that the RCW was a great improvement over other field rations, such as the MCI and the Long Range Patrol rations (LRP).

Table 8. Convenience and Quality, Mean Ratings

		CANAD	A		ALASK	. A
	N	<u>x</u>	SD	N	<u>x</u>	SD
Overall Convenience of RCW (7 point scale, l=Extremely Convert 7=Extremely Inconvenient)		2.9 t,	1.4	16	2.2	0.8
Convenience - RCW vs. MCI (7 point scale, l=Much More, 7=Much			1.5	13	2.0	1.1
Quality - RCW vs. MCI (7 point scale, l=Much More, 7=Much	_	2.1 ess)	1.0	13	2.0	1.2

The Canadian and Alaskan evaluations (Table 9) differed in the ranking of possible improvements. The Canadian test subjects felt that the most important improvement would be to include more breakfast foods, followed by increased variety in the ration, larger portion sizes, improved taste, and lastly, easier preparation. The Alaskan subjects felt that more variety was most important, followed by improved taste, more breakfast foods, easier preparation, and lastly, larger portion sizes.

Table 9. Proposed Ration Improvements, Rankings (5 point scale, l=Most Important, 5=Fifth Important)

		CANAD	Α		ALASK	Α
	N	X	SD	N	<u>x</u>	SD
Improve Taste Increase Variety Easier Preparation Include More Breakfast Foods Increase Portion Sizes	2 1 2 1	3.1 2.7 3.5 2.5 3.0	1.4 1.4 1.2	14 14 15	2.4 2.0 3.8 2.4 4.1	0.9 0.9 1.4

Table 10 summarizes comments common to both evaluations. Most have been mentioned previously in this report. Other comments were limited to a specific evaluation. Canadian subjects' comments dealt primarily with preparation. They indicated the

entree bars were harder to crumble when cold (6 percent), the caramels were too difficult to unwrap (9 percent), the amount of packaging was in excess (7 percent), and the Orange Beverage Bar did not rehydrate properly. One subject increased variety by mixing foods, ie. the fruit soup with the oatmeal.

Table 10. Common Submitted Comments (%)

	CANADA (N=69)	ALASKA (N=29)
	(5),	(=))
Increase Oatmeal	7	3
Granola Bar Unacceptable	6	10
Too Much Candy	3	7
Add a Spice Packet	6	3
Increase Hot Drinks	3	7
Increase Main Meal	3	3
Increase Candy Variety	6	7
Add Fruit	4	3
Increase Soup Portions and Variety	3	13

The subjects' comments from the Alaskan evaluation concerned primarily acceptance. They indicated that they would like to see more oatmeal cookies (3 percent), more ready-to-eat items (3 percent), and more variety in beverage bar flavors (7 percent). Two comments (7 percent) suggested deleting the fruit soups from the ration.

Water Availability

According to Tables 11-13, water was readily available, and water discipline was practiced. The men were "always" able to obtain sufficient water for rehydration. In addition, the men "almost always" had enough water to satisfy their thirst. An indication of the presence of water discipline can be found in the average amounts of water used per day, despite the suggestion that water was only "slightly easy" to obtain. The men used an average of 3.3 canteens (3 liters) or 6.6 to 6.8 canteen cups (approximately 3.2 liters) of water per day. This amount compared satisfactorily to the 3.0 to 3.5 liters recommended for

cold weather intake⁴. Other evidence of organized water management can been seen in the fact that the men melted water two to three times daily in larger vessels than a canteen cup. This reflected the high degree of training present in the specially organized and educated Navy SEALs. As a result, dehydration, so often present in arctic situations, was absent.

Table 11. Water Availability, Mean Ratings

		CANAD	A		ALASH	ζA
	N	<u>x</u>	SD	N	<u>x</u>	SD
Sufficient Water to Rehydrate (7 point scale, l=Always, 7=Never		1.2	0.7	16	1.9	1.0
Ability to Satisfy Thirst (7 point scale, l=Always, 7=Never		1.8	1.4	16	2.1	1.2

	CANADA (N=21)	ALASKA (N=16)
Canteen Cup	0	1 2
Larger Vessel	100	88
Didn't Melt	0	0

CONCLUSIONS

The following can be concluded based on these field evaluations:

- 1. Both the RCW ration and its components were generally acceptable to the test subjects, with the exception of the Granola Bar.
- 2. Although 85-100% of the men had received enough to eat, many also desired increased portion sizes in primarily the breakfast items and secondarily in the entrees.
- 3. Overall, the men were satisfied with ease of preparation, taste, appearance, quantity, and variety within the ration; however, they were dissatisfied with variety between ration menus.
- 4. The RCW received favorable rankings in convenience and quality and was considered an improvement over other field rations, such as the MCI and the LRP.
- 5. Water availability was high, resulting in sufficient water intake (an average 3.0-3.2 liters where 3.0-3.5 liters are recommended).

This document reports research undertaken at the US Army Natick Research, Development and Engineering Center and has been assigned No. NATICK/TR-86/042 in the series of reports approved for publication.

ADDENDUM

The following adjustments have been made since this field test^5 :

- I. The caramel candies were dropped from the ration due to the difficulty that the men experienced in opening the packages in cold environments.
- 2. The granola has been reformulated for improvements in flavor and texture.

APPENDIX C Ration, Cold Weather (Arctic Ration) Questionnaire

DAY TWO

ARCTIC RATION QUESTIONNAIRE

U.S. Army Natick Research & Development Center Natick, Massachusetts 01760

1. How long have you been in the Armed Forces? _____ years, ____ months

During the past several days you were fed a new ration. We are interested in your honest reactions to these foods. Your responses to these questions are important to the future development of this ration and are strictly confidential.

	2.	What i	is your r	ank'											
	3.	each c	of the it	following tems in the copinion. IR TRIED" ca	Arctic Rat If you nev	ion by mar er tried a	kinj pa:	g the	e nur ular	nber iter	that n, pl	bes	i t

18.	Below is a list of possible ways of improving the Arctic Ration. Please write the number "l" next to the improvement you think is MOST important, the number "2" next to the improvement you think is SECOND in importance, the number "3" next to the improvement you think is THIRD in importance, the number "4" next to what is FOURTH, and the number "5" next to what is FIFTH. Do not mark an item if you do not think it will improve the ARCTIC RATION.						
	Make the rations taste better						
	Increase the variety in the rations						
	Make the rations easier to prepare						
	Include more breakfast foods in the ration						
	Make the portion sizes larger
